EDUCATION

Florida State University | Tallahassee, FL

Spring 2027

Bachelor of Science, Computer Science, GPA: 3.85

Relevant Coursework: Data Structures & Algorithms, Databases, Software Engineering, Computer Organization, Full-Stack C#

Honors: Dean's List, Mores Scholar, Quest Scholar | **Activities:** Association for Computing Machinery (ACM)

EXPERIENCE

Leidos | Orlando, FL

May 2026 – Present

Collaboration Services Intern

- Built a PowerShell automation script to remediate OneDrive permissions by searching 60,000+ OneDrive sites for user access, removing outdated permissions, and reapplying correct access to prevent legacy access issues.
- Created Power Automate workflows using REST API endpoints to support team operations, including auditing intranet deletion activity across enterprise content systems.
- Designed an API-driven archival workflow to migrate intranet content into SharePoint while preserving 1,000+ folders and their structure for an organization of 50,000+ employees.
- Collaborated with two interns to identify team workflow needs, divide implementation responsibilities, and deliver internal tools used by the collaboration services team.

Florida State University | Tallahassee, FL

February 2026 – May 2026

Research Assistant – Anomaly Detection & Deep Learning

- Benchmarked and evaluated deep learning models using Python for anomaly detection on large-scale trajectory datasets.
- Executed data preprocessing, training, and evaluation pipelines on HPC clusters using Slurm and GPU-enabled nodes.
- Configured and managed reproducible ML environments (TensorFlow, scikit-learn, NumPy, Pandas) while adapting research code for HPC deployment and performance evaluation.

PROJECTS

TallyPRs – Social Fitness Tracking Platform | ASP.NET Core, PostgreSQL, React, TypeScript, Docker, Azure, Vercel

- Built and deployed a production full-stack social fitness platform using ASP.NET Core, React, and PostgreSQL to support PR posts, comments, likes, and admin validation workflows.
- Containerized the backend with Docker and deployed it to Azure, enabling consistent production hosting and FFmpeg-based video compression.
- Secured API resources with JWT authentication, role-based authorization, endpoint protection, and rate limiting across user and admin workflows.
- Integrated Cloudflare R2 for image and video uploads, supporting scalable media storage, compression, and optimized playback.

PrepYield – Meal Prep Yield Tracker | React, TypeScript, Vite, Bootstrap, Cloudflare

- Built and deployed a React/TypeScript meal-prep tracker that calculates cooked-to-uncooked food yield percentages for portion control and consistency.
- Implemented Local Storage persistence and a Bootstrap interface to save user-entered food yield data across sessions without backend storage.

Vector Implementation | C++

- Implemented a C++ STL-style vector with dynamic resizing, capacity management, insertion, deletion, and indexed access.
- Managed manual memory using RAII and Rule of Three semantics, including destructor, copy constructor, and assignment operator.

SKILLS

Languages: C++, C#, Python, Java, SQL, TypeScript, Bash, PowerShell, HTML, CSS

Frameworks/Databases: ASP.NET Core, React, Entity Framework Core, PostgreSQL, SQLite, .NET MAUI

Tools/Concepts: Docker, Azure, Vercel, Supabase, Cloudflare R2, GitHub Actions, Git, Linux, Slurm, Postman, Power Automate

Concepts: REST APIs, JWT Authentication, RBAC, OOP, SOLID, Async/Await, Agile, SDLC
